DRAFT

Analiza relației dintre inteligență și vârstă

Methods

We report **how we determined our sample size, all data exclusions** (if any), all *manipulations*, and all measures in the study.

Participants

The final sample comprised 53 Romanian participants, aged 9 to 56 years ($M=30.40$, $SD=14.25$), 60.38% female. The intelligence quotient was ranged between 90 and 125 ($M=105.34$, $SD=6.45$)

Material

Procedure

Data analysis

We used R (Version 4.4.0; R Core Team, 2024) and the R-packages *foreign* (Version 0.8.86; R Core Team, 2023), *papaja* (Version 0.1.2; Aust & Barth, 2023), *psych* (Version 2.4.3; William Revelle, 2024), *rstatix* (Version 0.7.2; Kassambara, 2023), and *tinylab* (Version 0.2.4; Barth, 2023) for all our analyses.
